Arthur Shacklock, Fredrik Galtung : Measuring Corruption (Law, Ethics and Governance) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Measuring Corruption (Law, Ethics and Governance):

With the advance of an increasingly globalized market, the opportunities for, and scale of, corruption is growing. The size of corporations and their wealth relative to nations provides the resources for corrupt practices. The liberalization

of international financial markets makes transferring and hiding the proceeds of corruption easier. Moves towards privatization in East and West are providing once-only incentives for corruption on an unprecedented scale, as officials not only deal with the income of the state, but with its assets as well. In this book, Transparency International's (TI) world-renowned 'Corruption Perception Index' (CPI) and 'Bribery Perception Index' (BPI) are explained and examined by a group of experts. They set out to establish to what extent they are reliable measures of corruption and whether a series of surveys can measure changes in corruption and the effectiveness of anti-corruption strategies. The book contains a variety of expert contributions which deal with the complexity, difficulty and potential for measuring corruption as the key to developing effective strategies for combating it.

'...Measuring Corruption provides a useful tour d'horizon of the current state of the debate and examines the strengths and weaknesses of the various approaches to measuring corruption.' The Financial Regulator
About the Author
Professor Charles Sampford is Director of the Institute of Ethics, Governance and Law at Griffith University (IEGL), Australia.
