**Samantha Hepburn : Mining and Energy Law** before purchasing it in order to gage whether or not it would be worth my time, and all praised Mining and Energy Law:

Mining and Energy Law is the only textbook available that encompasses a discussion of both the law and the policy of mining and resource regulation in existing and emergent areas, for the Commonwealth as well as for the states and territories in Australia. The book begins by examining the ownership framework underpinning natural resources within Australia and reviews the proprietary status and scope of mining tenements, and the regulation of offshore

petroleum extraction. It goes on to explore the legal regimes that have emerged in response to more recent developments, such as coal seam gas, renewable energy and geo-sequestration. The book concludes with a discussion of the commercial and contractual arrangements commonly used by transacting parties operating in the sector. *Mining and Energy Law* is the ideal starting point for anyone seeking to understand the regulatory regimes and policy challenges relevant to one of Australia's most important industry sectors.

**About the Author** Professor Samantha Hepburn is the author of several textbooks. Her research and teaching interests include property and land law, native title, water rights, Indigenous environmental law and the propertisation of carbon interests.
