James Rasband, James Salzman, Mark Squillace : Natural Resources Law and Policy (University Casebook Series) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Natural Resources Law and Policy (University Casebook Series):

0 of 0 people found the following review helpful. Great text bookBy JenNeeded this book for a class. Well done. Book breaks down case law into understandable terms. Allows students to gauge different approaches and think about variety of issues associated with natural resources and their uses.0 of 1 people found the following review helpful. Excellent BookBy Samuel T. SteinmetzOf course, I am using this for a law school class, but I really enjoy it as well. The book was in excellent condition, and ironically enough, came from a person in Missoula, Montana where I did my undergraduate studies, and am working on getting a Natural Resources Conflict Resolution certificate.1 of 1 people found the following review helpful. Textbook ReviewBy M. HecoxI bought this book for a Wildlife and Wilderness Law class at UCSC. Considering the size of this text, the price was great! So far it is a very informative and interesting

read.

This law school casebook presents the law and policy of natural resource management in a user-friendly and engaging manner. The book covers a wide range of natural resources from forests and wildlife to oceans and rivers with problem exercises and case studies for students to sharpen their understanding of the issues. The book begins with an exploration of the economic, scientific, political and ethical considerations that drive natural resource policy as well as consideration of the natural resource management challenges presented by common pool resources, scientific uncertainty, mismatched scale, market failures and institutional adequacy. The book then explores these themes and explicates the basic legal regimes for a range of resources: wildlife, fisheries, whaling, water, protected lands, range, mining, and forests. The book also considers natural resource law and management on both public lands and private property, as well as in international settings.
