From Fernwood Books Ltd : Oppression: A Social Determinant of Health before purchasing it in order to gage whether or not it would be worth my time, and all praised Oppression: A Social Determinant of Health:

Oppression and health are intricately connected. A recent emphasis on the social determinants of health has focused attention on the causes of the causes of ill health, including systemic forces such as capitalism, globalization,

imperialism, medicalization, neo-colonialism and neoliberalism. If we are to change the oppressive practices that cause ill health our analysis must consistently and explicitly integrate these systemic forces and thus reframe growing health inequities within the scope of moral responsibility and social justice. The internationally recognized authors of this book do just this. An important addition to the relatively new field of critical health studies, *Oppression* is an integration of critical social scientific perspectives and health systems/health sciences knowledge. The goal of the book is to support, enhance and provoke action to interrogate the progress of oppression. It can be done, and it is being done."
