From CRC Press : Patent Laws for Scientists and Engineers before purchasing it in order to gauge whether or not it would be worth my time, and all praised Patent Laws for Scientists and Engineers:

Although many texts attempt to explain intellectual property law to scientists and engineers, they are ineffective because they fail to present the subject within the proper scope; they are either too expansive or too detailed for the needs of researchers and inventors. Instead of giving a mile-high view of all types of intellectual property or, at the other extreme, turning readers into pseudo-patent attorneys, *Patent Law for Scientists and Engineers* provides researchers and students with an understanding of the aspects of patent law necessary to work with patent professionals and enhance patent coverage. The editor has structured the text so it can be easily integrated into a reader's research routine. Each chapter supports the issues discussed with fact patterns that emphasize the steps necessary to protect patent rights. The book describes actual scenarios encountered by scientists and engineers, highlighting the protection of latent patent rights that may exist within an invention or technical solution.
