From Eleven International Publishing : Radioactive Waste Management in International and European Legal Perspective before purchasing it in order to gage whether or not it would be worth my time, and all praised Radioactive Waste Management in International and European Legal Perspective:

The management of radioactive waste in Europe and elsewhere has been the subject of continuous legal and political

challenges, both in courtrooms and by environmental groups in the field. Public concern was and is often considerable. Somewhat remarkable perhaps, the management of radioactive waste has not received the attention in academic literature it so very much seems to deserve. One of the purposes of this book is to examine and discuss some important aspects of the relevant law, notably of the European Union. Under EU Law, radioactive waste management largely has a separate Euratom regime. This special Euratom Community has hardly been affected by all the developments from the original Community Law to modern EU Law. It has missed all the Treaty changes, from Maastricht and Amsterdam all the way to the Lisbon Treaty. Minimal power of the European Parliament in this field is one of the consequences. This book discusses and critically analyzes in detail how the Euratom regime functions in respect to such an important part of the management of radioactive waste. It critically analyzes the applicable instruments of Euratom law, the relevant jurisprudence of the European Court of Justice, as well as some salient developments in national and international law. [Subject: Environmental Law, International Law, EU?Law]

About the Author Harry H.G. Post is Professor of International Law, ret., University of Exeter, UK; Visiting Professor, Faculte libre de droit, Universite Catholique de Lille and at the Dipartimento di Giurisprudenza, Universita degli Studi di Sassari.
