From Routledge : Regulating the Global Information Society (Routledge Studies in Globalisation) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Regulating the Global Information Society (Routledge Studies in Globalisation):

An outstanding line-up of contributors explore the regulation of the internet from an interdisciplinary perspective. In-depth coverage of this controversial area such as international political economy, law, politics, economics, sociology and internet regulation. *Regulating the Global Information Society* covers the differences between both US and UK approaches to regulation and establishes where policy is being made that will influence the future direction of the global information society, from commercial, democratic and middle-ground perspectives.

"This anthology concerns the many sources of conflict associated with computers and communication networks in the international economy and efforts to resolve such disputes. The subject is one of overwhelming complexity.... Many of the authors represented here are participants in national and international conflict resolution efforts, and they have long lists of academic and professional publications. Overall, the quality of the articles is very high, and a majority are very detailed and extraordinarily well documented. The best concentrate on particular subjects such as antitrust law.."-
