Stewart White, etc., Stephen and Johnson Bate : Satellite Communications in Europe: Law and Regulation
before purchasing it in order to gage whether or not it would be worth my time, and all praised Satellite
Communications in Europe: Law and Regulation:

This is a practical guide to a rapidly expanding area of law. It guides practitioners through the complex regulatory framework in a step-by-step manner and takes them, clause by clause, through the full range of commercial contracts used in satellite communications. These include agreements for satellite construction, satellite launch and satellite transponders. The book gives an overview of general legal and regulatory principles and answers such vital questions as, What are the procedures for applying for a licence? and, What are the regulations concerning the content of transmissions? Taking account of all major developments that have occurred since the previous edition, this book: explains how the EC Directives on Equipment and Mutual Recognition of Licences which are in force affect satellite communications; examines the practical implications of major new policy statements such as Infrastructure Green Paper; includes revised treatment of satellite transponder contracts to account from digital agreements; and provides a new chapter on interconnection and roaming agreements.

This book will act both as an invaluable reference work to the initiated and contribute tremendously to the instructions of others. It is a useful text for all lawyers who are interested in this field, or who advise clients involved in satellite

communications. It is to be much commended. A well thought out and executed introduction to the subject area, clearly and concisely written ... Computer Law and Practice (on a previous edition)
